

### **IN THE SPECIFICATION**

The Office Action objected to disclosure because of the following informalities: On page 5, line 18, the line "memory controller hub 125, memory 124" should be changed to "memory controller hub 124.1, memory 124.2" to reflect the proper element labels in the drawings.

Please amend the specification as follows:

**The paragraph beginning at page 5, line 16 is amended as follows:**

FIG. 2 is a block diagram providing further system level details of a baseboard device 120 incorporating embodiments of the invention. In some embodiments of the invention, baseboard device 120 comprises a processor 122, ~~memory controller hub 125, memory 124,~~ memory controller hub 124.1, memory 124.2, I/O controller hub 132, IDE/Keyboard/Mouse interfaces 134, first communications interface 126, components 128, second communications interface 130 and SCSI controller 136, all coupled via system bus 150. While illustrated in FIG. 2, not all embodiments of the invention need include all of the items listed, and various embodiments of the invention may include varying combinations of the above-listed items.

The Office Action objected to disclosure or drawings because reference character 310 is shown in FIG. 3 but not in the description. In response, please amend the specification as follows:

**The paragraph beginning at page 9, line 1 is amended as follows:**

Additionally, the message sent to the proxy system is received by the proxy system and forwarded to the management system by the proxy system acting on the behalf or the system executing the method (block 310).
